This original walkthrough was built from a fresh replay of the supplied Release 48 story. It reaches the ending transition with the maximum score and no player deaths. Its command sequence, deterministic seed, and opcode trace are retained locally for regression replay.

Route details

The route consumes 405 command inputs and 396,470 VM instructions. Replay completed as **Halted**. The final state fingerprint is C1A1D6F260AD9A24FFB6F8DEADA04F884A57374F67D121BCE0DD28D4471150E6.

Follow each command in order. Repeat notation means submit that same command separately for the stated number of inputs. Keep the listed look, inventory, and score checks; this seeded route was validated with those inputs present. The story's random carousel and odd-room movement make the seed and full sequence significant.

The Wizard and the lamp

Delay paying the demon until after the bank. The lamp burns out while waiting in Fresco Room; the fourth wait triggers the Wizard's *Floresce* spell and removes the darkness hazard. The route completes the waiting sequence in Fresco Room before collecting the bank valuables and returning to the demon.

The oddly angled rooms

The club marks home plate. Run southeast, northeast, northwest, southwest in sequence. The four correct moves solve the hidden diamond. In this replay, east from the resulting room returns to the center stairway; go down to Cerberus. The annotated ZIL source describes the four-move sequence and room-state behavior.

Walkthrough

A complete command record, grouped into practical stages. Diagnostic commands are included because the verified route uses them as part of the deterministic input sequence.

01. Open the sphere routes

Find the gazebo supplies, open the tiny locked room for the blue sphere, then solve the riddle and obtain the red sphere through the robot.

```
take lamp
take sword
go south [repeat 3 times]
go southwest
go south
go southeast
enter gazebo
take all
exit
go south [repeat 2 times]
go west
turn on lamp

Executed opcode inventory

Every unique opcode executed during this fresh replay. Opcode numbers are hexadecimal; the form disambiguates encodings. PCs are byte addresses. First sequence is a 1-based instruction execution index.
