# SEA STALKER

## Maximum-score mission walkthrough

A fresh-start Scimitar route from the Morgan lab to the Sea Cat encounter

**VERIFIED FINISH**

**100 / 100**

**202 commands | 213 moves | no player deaths**

383,400 executed instructions | seed 1035

59 opcode rows | Release 15 | Serial 840522

## How to play this route

Start a fresh Sea Stalker Release 15 game and enter the requested name. This deterministic route uses seed 1035 and reaches 100/100 in 213 story moves.

The route clears the lab alert, prepares the Scimitar, crosses Frobton Bay without grounding, fixes the depth regulator, and docks at the Aquadome.

At the Aquadome, gather evidence, identify the threat, prepare the dart gun and bazooka, install the fine sonar grid, and expose Bill Greenup before returning to sea.

The final encounter requires the exact response sequence to Tip, Dr. Thorpe, and Sharon. The route ends after the winning scene and quits at the post-ending prompt; no player death occurs.

## Score checkpoints

**24 / 100**
The reactor, engine, gate, and throttle are ready; enter Frobton Bay.

**34 / 100**
Reach open ocean and set the Scimitar on autopilot.

**49 / 100**
Dock at the Aquadome and install the relay in the air system.

**69 / 100**
Prepare the dart gun and attach it to the Scimitar's claw.

**84 / 100**
Expose Bill, stop his escape, and restore docking tank power.

**100 / 100**
Aim at and destroy the Sea Cat power pod; Sharon confirms mission success.

**ENDING VERIFIED**

The Scimitar destroys the Sea Cat power pod. Sharon reports Thorpe incapacitated, then confirms the mission is complete. The story awards 100/100 and presents the restore/restart/quit prompt; choose QUIT.

The field sketches index 34 named rooms and ocean encounter locations.
Red arrows show selected travel; the route uses one deliberate sonar-safe path across the bay.

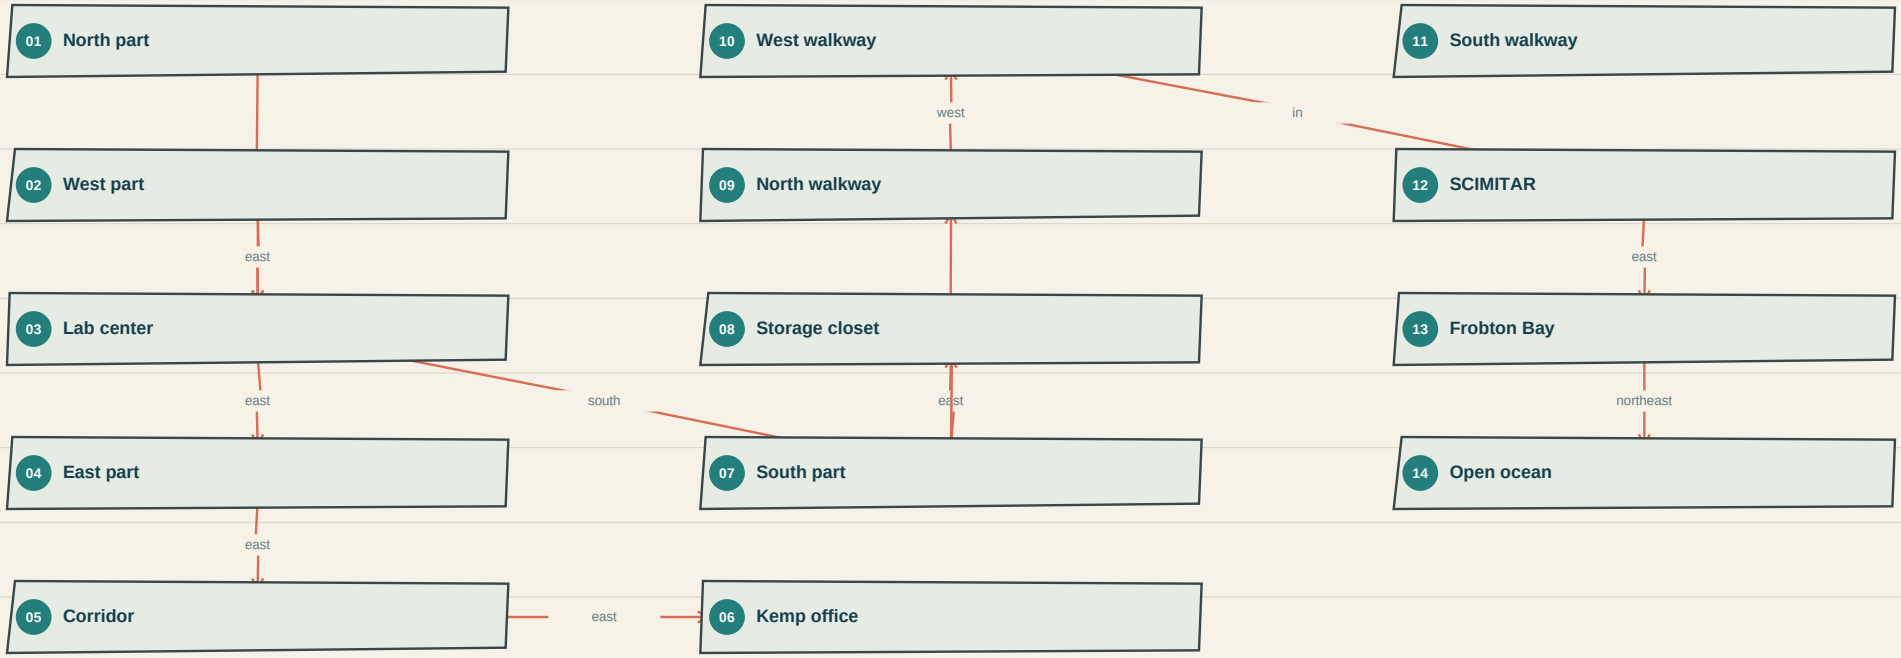
# Research laboratory and launch

Sheet 1: numbered boxes are field notes; red arrows show first-arrival directions.



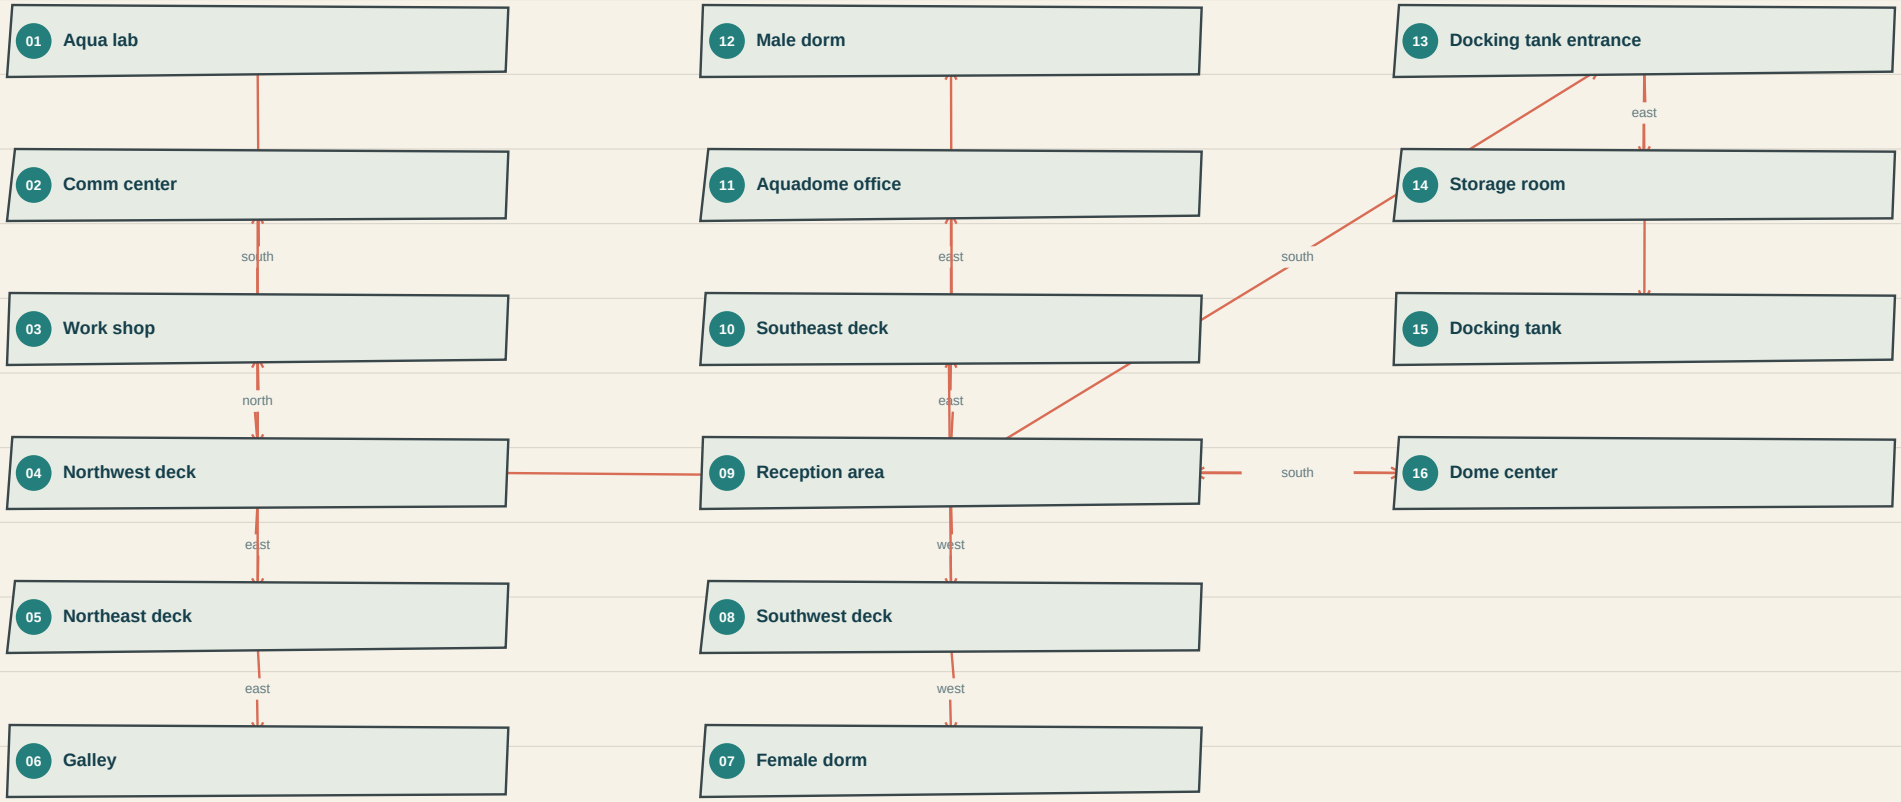
*Launch from the Scimitar to Frobton Bay; the shaded side rooms are optional to visit.*

**MAP KEY** Arrows show selected route travel; unlabeled connections are not expanded to scale.

The ocean sheet marks moving encounters and navigational hazards, not fixed room objects.

# Aquadome station

Sheet 2: numbered boxes are field notes; red arrows show first-arrival directions.



*The lower docking tank links the station to the Scimitar; the selected route visits the office, decks, shop, and storage.*

**MAP KEY** Arrows show selected route travel; unlabeled connections are not expanded to scale.

The ocean sheet marks moving encounters and navigational hazards, not fixed room objects.

# Open-ocean route and encounter notes

Sheet 3: numbered boxes are field notes; red arrows show first-arrival directions.

*Event locations are schematic sea squares, not land rooms. Keep the Scimitar moving through the silt field.*

**MAP KEY** Arrows show selected route travel; unlabeled connections are not expanded to scale.

The ocean sheet marks moving encounters and navigational hazards, not fixed room objects.

# Opcode table 1 of 3

Grouped by actual instruction form, opcode number, and mnemonic; ordered by first appearance.

**59 unique form/opcode/mnemonic rows** **383,400 total instructions executed**

First Seq is one-based execution order; First PC is the first address in hexadecimal.

| FORM | OPCODE | MNEMONIC | COUNT | FIRST SEQ | FIRST PC |
